

Design and create **unique personalised** Slot-Racing tracks

Limited edition 1/32nd scale vehicle models, for stationary display or Slot-Racing

With accessories to scale and **custom** dioramas.

Jouef, Scalextric ou Circuit 24...

These are words that will spark real memories for most boys born between 1960 and 1985.

Who never played with an electric race track? The toy that had tremendous commercial success for over twenty years.

More exciting than the electric train, the race track quickly became the scene of furious competitions that could last all afternoon, or even finish late into the night!

The introduction of computer games and driving simulators has much reduced the once enthralling car racing game. It also became less fashionable for adults to display a public passion for cars.

But for many children of the 1960s, who in turn became parents at the turn of the millennium, the passion has never diminished. Now attracted to a certain vintage style, they wish to rediscover and enjoy the familiar sights and sounds of their childhood.

There has subsequently been a strong revival of this hobby, with a demand for a more sophisticated design than the simple toys of the past.

**By creating the company Trajectory,
I am offering the opportunity for Slot Racing amateur
to fully embrace their passion,
and for the automotive [and entertainment] industry
to develop unique commercial attractions.**

WHO AM I?

With twenty years of project management and design experience, I have the skills and experience to deliver **turnkey projects**

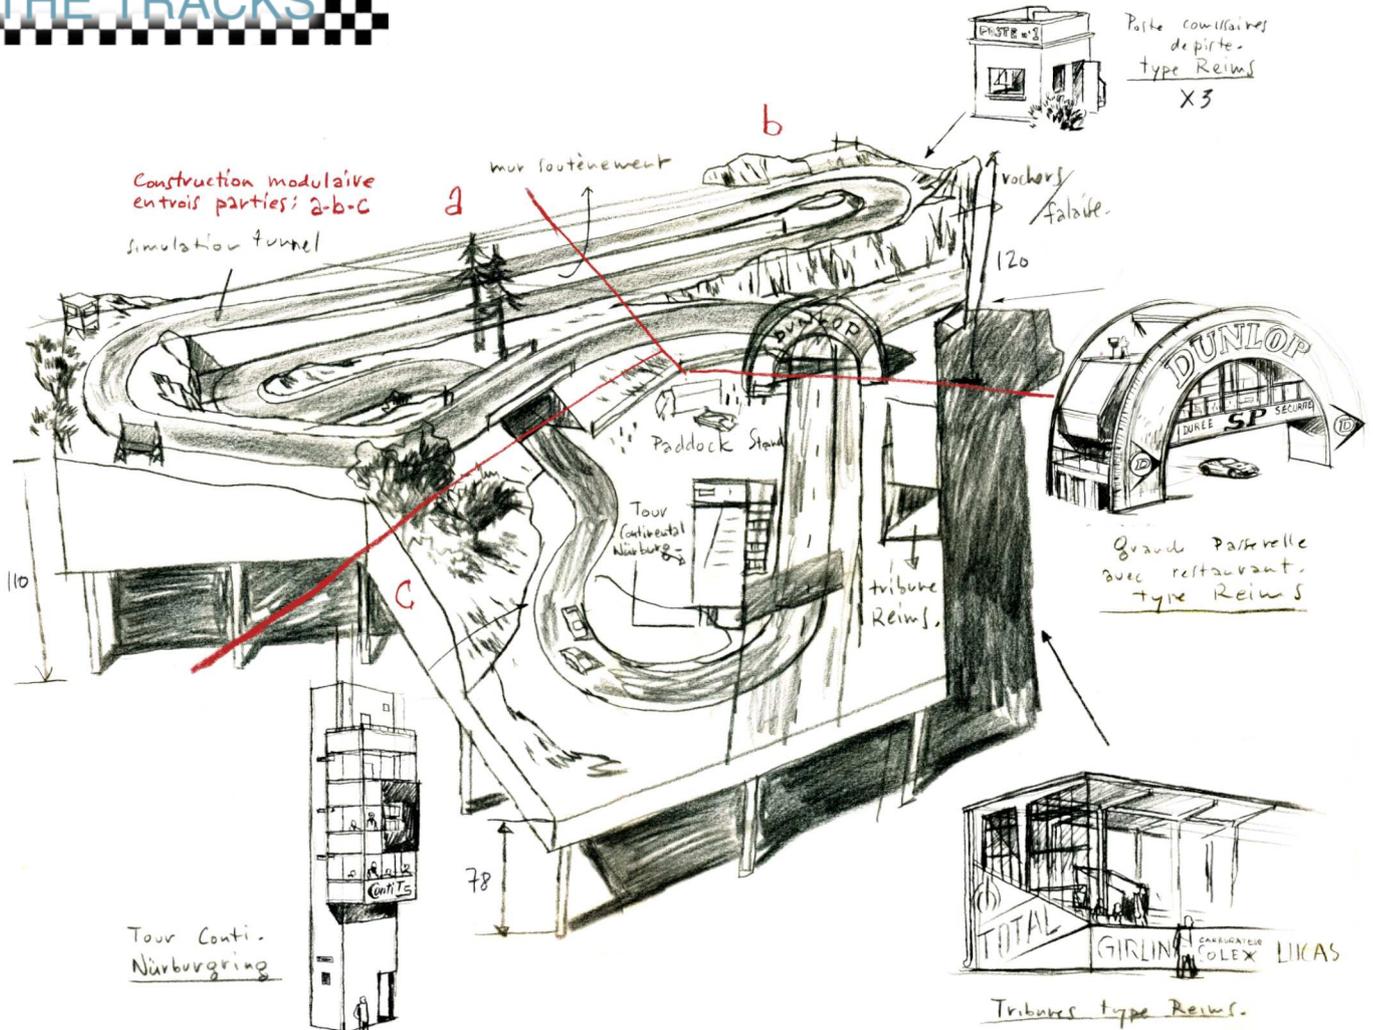

Having practised model making for many years, I am highly familiar with how to implement all architectural elements, landforms and settings to deliver an authentic and credible track design.

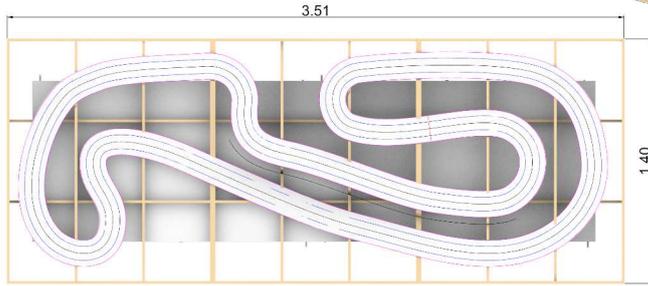

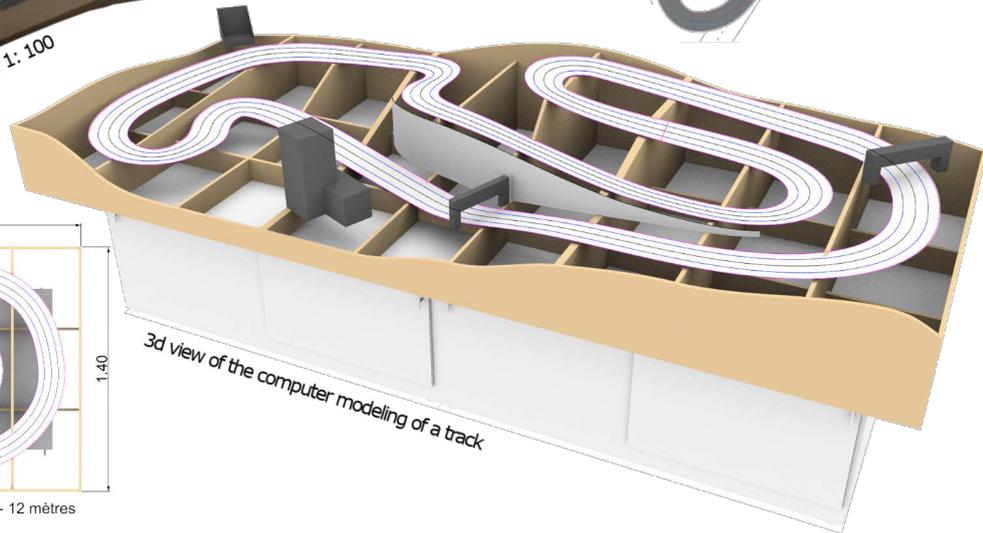

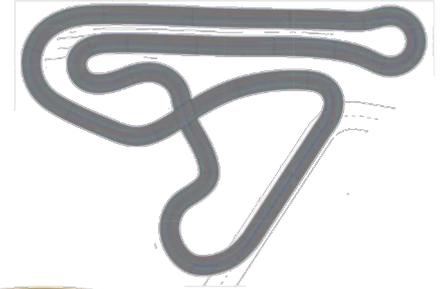

My experience has enabled me to build strong prototyping skills across a range of techniques - 3D printing, raw material sculpturing, reproduction using moulding and resins. I have already delivered several original scale models, which have been produced in limited series runs.

THE TRACKS

Installed to last on an appropriate support structure, the race track can be delivered using commercial plastic construction or, preferably, an **integral wooden track**. Entirely custom-made, it allows a **more natural trajectory** and offers a **perfect driving experience**.

Sens de roulage →

développé - 12 mètres

Before construction begins, the design must be carefully considered to offer the right balance of joyful simplicity and technical complexity to enable a realistic, enjoyable and appropriately challenging experience

THE DECOR

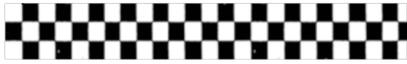

Just like the layout of the track, the decoration choices are confirmed through consultation. In particular, it is important to determine the time period and landscape style. The level of detail and finishing is also established through discussion and agreement.

Very high definition **figurines** are developed using 3D printing. They are fully **personalised** through the use of **body scanning**.

Through **research work** and **many archive documentations**, the **buildings** are drawn in CAD, to then be done in CAD, using digital milling machines.

Autodrome - Jo SIFFERT -

- scale 1/32^{eme} - overall length 4.64 meters - width 3.12 meters

- developed the 19 meter linear track

THE CARS

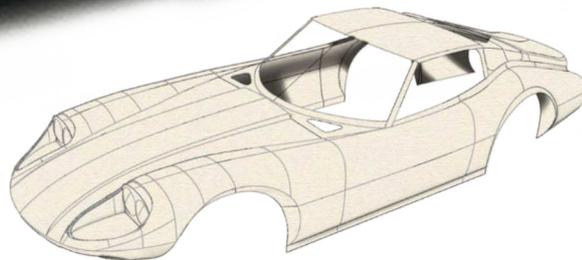

Dedicated collector models, compatible with Slot Racing, are developed and marketed under the brand **Foula^g production** KIT, RESINE 1/32. These cars can be custom made, creating a perfect scale model of a car that is totally unique to the client.

The miniatures are sold as part of a self assembly kit, or entirely mounted and ready to install. They can also be ordered as part of a specific build, or as required.
